

Deliverable 2: Data Dictionary

Team: Jay Patel, Sharad Swaminathan, Aishwarya Babu, Ianesh Karthik Bandhuchoday
ITCS/DSBA 6160

Campus Eats is a database for a food delivery app for college students ordering food on campus. Campuses do not like a steady stream of unknown visitors that may not have a connection to the university, coming to deliver food to students. Companies such as UberEats and GrubHub are happy to deliver on campus, but because of health and safety reasons it is better if there is a separate service for delivering food to students on college campuses. This ensures that only authorized personnel enter the school premises for food delivery.

Table Name: rating

Column Name	Data Type	Description
rating_id	int NOT NULL primary key,	Identification number of the item
food_rating	int	Rating from 1 to 5 , 1 being bad
delivery_rating	int	Delivery rating from 1 to 5, 1 being bad
comments	varchar(200)	Comments about the food or delivery
picture_link	varchar(100)	Link of the picture (if the user wants to post it)
order_id	Int FOREIGN KEY	Reference to order table

Table Name: menu

Column Name	Data Type	Description
item_id	NOT NULL primary key,	Identification number of the item,
item_name	varchar(100)	Name of the item,
item_desc	varchar(200)	Description of the item,,

item_price	float	Price of the item,
restaurant_id	Int FOREIGN KEY	Reference to restaurant table

Table Name: menu_order

Column Name	Data Type	Description
menu_order_id	Int NOT NULL primary key	Identification number for menu order
item_id	Int FOREIGN KEY	References to menu table
order_id	Int FOREIGN KEY	References to order table
cooking_specification	varchar(100)	Any specific cooking instructions (spice level, allergies)
